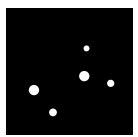
Module 2 - inference cascade (synthesize_trajectory())



X_n, M_n
current image + mask (n=0: real baseline)
+ target stage c

Generator (best-G.ckpt)

X_{n+1}
synthesized image, stage = target c

feeds back as next X_n, M_n
($c \leftarrow c + 1$)

Module 1 (re-run)

4 U-Nets re-segment $X_{n+1} \rightarrow M_{n+1}$
ResNet-50 re-grades $X_{n+1} \rightarrow$ predicted grade
consistency = (predicted grade == c),
logged only

stop when c = end stage
(default 4, PDR)
trajectory =
[baseline, X_1 … X_end]
→ report (Module 3
estimate per stage)
